PROFESSIONAL SUMMARY

Linux infrastructure and Site Reliability professional with 4+ years building scalable automation pipelines, SOC platforms, and AI-powered agent systems. Hands-on expertise in CI/CD pipeline engineering (Jenkins), container orchestration (Docker/Kubernetes), Infrastructure as Code (Terraform/Ansible), and Linux systems administration. Proficient in Python for automation, scripting, and REST API development. Experienced in monitoring and observability toolchain setup (Zabbix, Prometheus, Grafana) and incident response with SLA/SLO/SLI framework adherence.

CORE COMPETENCIES

Site Reliability

SRE Practices · SLA/SLO/SLI ·  
Incident Response · On-Call ·  
Blameless Postmortems ·  
Runbooks

Cloud & IaC

AWS (S3, EC2, IAM, CLI) ·  
Terraform · Ansible · Infrastructure  
as Code · Cloud Native  
Architecture

Container & Orchestration

Docker · Kubernetes  
(Pods/Services/Deployments) ·  
OpenShift · Container Security ·  
Helm Charts

CI/CD & DevOps

Jenkins Pipelines · Maven/Gradle ·  
GitOps · Blue-Green Deployments  
· Automated Testing

|                       |                                                                                                 |
|-----------------------|-------------------------------------------------------------------------------------------------|
| Site Reliability      | SRE Practices · SLA/SLO/SLI · Incident Response · On-Call · Blameless Postmortems · Runbooks    |
| Observability         | Zabbix · Prometheus · Grafana · ELK Stack · PagerDuty · Alertmanager · Log Aggregation          |
| AI & Automation       | CrewAI · LangChain · DSPy · Python scripting · REST API development · Bash automation           |
| Security & Compliance | Wazuh SIEM · OpenVAS/GVM · ModSecurity WAF · TLS/SSL · Fail2ban · Firewall (iptables/firewalld) |
| Linux Administration  | RHEL/CentOS · Ubuntu Server · LVM · systemd · Kernel Tuning · SELinux · LVM · NFS · SAMBA       |

TECHNICAL PROFICIENCY

- Languages: Python · Bash · Java · Go · JavaScript/Node.js
- DevOps Tools: Docker · Kubernetes · Jenkins · Ansible · Terraform · Git · Maven · Gradle
- Cloud: AWS (S3, EC2, IAM) · Azure Ubuntu nodes
- Servers: Apache httpd · Nginx · Tomcat · MariaDB/MySQL · Redis
- AI Stack: CrewAI · LangChain · DSPy · ScrapeGraphAI · TradingView MCP
- Monitoring: Zabbix · Prometheus · Grafana · Loki · PagerDuty

WORK EXPERIENCE

DevOps Engineer | PanApps Inc.

Jan 2024 – Present | Kerala, India

- **SRE Practices:** Defined and monitored SLA/SLO/SLI for 20+ enterprise Linux endpoints; maintained 99.9% uptime via Zabbix alerting thresholds, runbooks, and incident response on-call rotations and conducted blameless postmortems to drive systemic improvements
  - **CI/CD Pipeline Engineering:** Designed and maintained Jenkins pipelines with automated build, test, and blue-green deployment workflows for enterprise applications
  - **Infrastructure as Code:** Automated cloud resource provisioning using Terraform scripts; managed AWS S3 backup rotation with 30-day retention policy via Bash + AWS CLI
  - **Container Orchestration:** Deployed and managed Docker containers across staging/production; evaluated Kubernetes for microservice workloads
  - **Monitoring & Observability:** Configured Zabbix dashboards for 20+ endpoints; implemented log aggregation pipelines with Apache httpd access log analysis and alerting integration
  - **Security Automation:** Integrated OpenVAS/GVM vulnerability scanning and Wazuh SIEM alert correlation with Redmine ticketing; configured ModSecurity WAF rules on Apache httpd
  - **AI Agent Development:** Built CrewAI multi-agent pipelines for autonomous trading research and job search automation, integrating TradingView MCP and ScrapeGraphAI
  - **Linux Administration:** RHEL/CentOS 7–9 server management — kernel tuning, LVM on nvme, systemd service management, SELinux enforcing mode, firewall policies
- 

### **System Administrator | Leadership Domestic Workers SC**

**Dec 2021 – Dec 2023 | Kerala, India**

- Full-stack Linux infrastructure management for 30+ endpoint LAN — wired/wireless, DNS/DHCP, Samba file server, VPN (OpenVPN split tunneling)
  - Deployed and administered Redmine 6.0 on RHEL for ITSM ticketing; integrated automated backup via rsync to external NAS storage
  - Configured Apache httpd reverse proxy with VirtualHost, SSL/TLS (Let's Encrypt), httpasswd authentication for internal web applications
- 

### **Linux System Administrator | IPSR Solutions Ltd**

**2020 – 2022 | Kerala, India**

- Administered RHEL/AlmaLinux workstations — DNF package management, Red Hat subscription, kernel and performance tuning
- Configured Apache httpd with VirtualHost, SSL CipherSuite hardening, and ModSecurity WAF for secure web serving
- Performed DoS mitigation using fail2ban; analyzed Apache access logs (IP frequency distribution) to block malicious traffic
- Set up LVM partitions on nvme drives (25GB swap + root), log rotation via cron and systemd timers
- Assisted in PHP 8.2 → 8.3 migration on Amazon Linux 2 and multiple .NET SDK version management
